

BlueBridge Save2Disk

Save SharePoint sites to disk. Simple as that.

As more and more users are uploading documents and managing lists in SharePoint, the requirements for sharing and archiving information grow. The existing mechanisms for saving SharePoint content are too rigid for everyday situations and lead to unnecessary storage costs, poor communication with partners and frustration among colleagues. BlueBridge Save2Disk offers a lightweight solution to this problem, allowing you to export SharePoint sites quickly and easily.

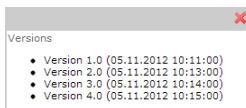

Lightweight export, archiving & backup tool

Save2Disk uses the SharePoint object model to quickly and easily download SharePoint sites, including lists, libraries and wikis. Content can be viewed on any PC: no license or installation required.

Convert files to PDF

To ensure better compliance, Save2Disk offers you the option to automatically convert office documents to PDF format.

Retain version history

You decide what you want to download. Choose from specific libraries, lists and views – and decide whether you want to keep older versions of documents.

Support for iPad, Surface and other tablets

Use Save2Disk to copy a SharePoint site to a local drive, and then take this with you on your tablet device. No separate apps required – it is all based on HTML5.

Web Content Management

Write website content in a SharePoint wiki, then simply export it and copy the exported content to your web server. A customizable skin takes care of your corporate design requirements.

Support for SharePoint in the Cloud

There is no server installation required for Save2Disk. This makes it ideal for Microsoft's cloud-based SharePoint offerings, as well as other hosted SharePoint services.

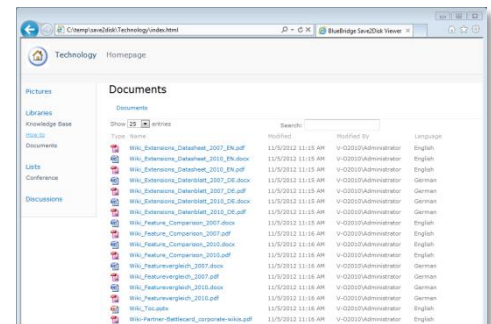

Return on Investment

- Export whole sites without having to manually download files and lists
- Save on storage costs by archiving specific content to a local drive
- Share content easily with partners without having to let them into your network
- No need to invest in expensive backup software
- Self-service backup without involving the IT department
- Salespeople and consultants can keep company information with them when they travel

Examples of Use

Save2Disk in Action

Compatibility

Save2Disk works with all versions of SharePoint 2007, 2010 and 2013 including SharePoint Online (Office 365). No client installation is required and you do not have to make any changes to SharePoint or install new features. The interface is in English.

About BlueBridge

BlueBridge Technologies AG has been working with Microsoft SharePoint since before the launch of the first version in Germany. We offer a range of services to help you turn your SharePoint system into what it should be – an effective, user-friendly and well accepted business platform. Please contact us for more information.
