# Wiki Extensions for SharePoint 2010

Company-wide Wikis - the way they were always supposed to be

It comes as no surprise that wikis have become one of the central features in SharePoint; and more and more organisations are now using wikis to communicate effectively. The BlueBridge Wiki Extensions build on this basis, opening up new possibilities in the realm of teamwork, as well as simplifying the process of knowledge transfer.

PDF Export / Printing

Why not try using wikis to create technical specifications, hand-books and guidelines? The BlueBridge Wiki Extensions make this even easier by allowing you to sort articles into chapters and then export these as a single PDF document with a table of contents.

Improved Navigation

While knowledge bases require no structured navigation, what would documentation look like if there were no structure? Use the navigation web part to guide users through the content, and a table of contents to help break down long wiki articles.

Re-Use Content

Save time and energy by re-using your wiki content. Use whole wiki libraries as templates, or add snippets to add standard text blocks to multiple articles. This is especially useful for specifications, where a great deal of content is the same for all products.

Other Features

- Enhanced editor with extra features
- Save article-specific documents and links
- Wiki web parts e.g. for easy navigation

Compatibility

- SharePoint 2010: Foundation & Server

- The Wiki Extensions are built around standard SharePoint technologies so there is no need to install a separate wiki server

Languages

- Installs on all language versions

- Interface is in English or German

Return on Investment

- Employees, customers and partners can keep informed of important topics through self-study
- Increased motivation and lower levels of frustration arise thanks to the ease of use
- Higher levels of motivation encourage users to really *live and breathe* SharePoint and use it for other applications as well

Examples of Use

Documentation	FAQs	Specifications	Knowledge Bases
Meeting Minutes	Project Coordination		Training plans

Project Expertise

Of course an out-of-the box product can only do so much. With over 10 years' experience in SharePoint, though, we have the expertise needed to build up relevant processes for your wikis. Here are some typical projects that we have implemented for our wiki customers:

- Complex workflows that set permissions and send custom notifications according to an article's current status
- Multi-language (users can translate articles, which are then automatically linked to the source article. This means that viewers can switch languages with a single click)
- Corporate Design and custom navigation
- Import from Microsoft Word, MediaWiki and other sources such as XML

About BlueBridge

BlueBridge Technologies AG has been working with Microsoft SharePoint since before the launch of the first version in Germany. We offer a range of services to help you turn your SharePoint system into what it should be – an effective, user-friendly and well accepted business platform. Please contact us or visit www.bluebridge.de for more information.
